

JCJC_Wireless

Windows 7 Configuration

This document contains step-by-step instructions on how to configure the JCJC wireless network, JCJC_Wireless using Windows 7.

- To configure Windows 7 for **JCJC_Wireless**, click the **Windows icon** in the lower left corner of your screen, and then select **Control Panel**.
- When the **Control Panel** window appears, select **Network and Internet**.
- Select **Network and Sharing Center**.
- In the next window, select **Manage wireless network**.
- Select **Add** to set up a profile for **JCJC_Wireless**.
- In the dialog box, type **JCJC_Wireless** for **Network name**.
WPA2-Enterprise for **Security type**. **AES** for **Encryption type**. Leave the **Security Key** field blank.
- Check the box **Start this connection automatically**. Click **Next**.
- Click **Change connection settings**.
- Make sure **Connect automatically when this network is in range** is checked and then select the **Security tab** at the top.
- In the **Security tab**, click the **Settings** button.
- **Uncheck Validate server certificate**. Click the **Configure** button in the **Select Authentication Method** section.
- **Uncheck Automatically use my Windows logon name and password (and domain if any)**. Click **OK**.
- In the **Security tab**, select the **Advanced settings** button.
- In the **802.1x settings** tab, select **Specify authentication mode**.
- From the drop down menu, choose **User authentication**. Click the **Save credentials** button.
- In the **Windows Security** window, enter your **MyJones ID** as **User name** and your **MyJones Password** as your **Password**. Click **OK** on all open property windows.
- When you are connected, you will see information in the **Network and Sharing Center**, which indicates that you are connected to the Internet.

Congratulations! Your Windows 7 machine is now configured to access JCJC_Wireless!
